
Full-sequence predicted vs true FC - rolling one-step protocol (group mean)
HC test - group mean (n=222)
MDD test - group mean (n=225)
True FC
Predicted FC
Predicted - True
Edge scatter
ROI (AAL116)
True FC edge r
Predicted FC edge r
r = 0.9997
MAE = 0.0041
median subject r = 0.9978
r = 0.9997
MAE = 0.0043
median subject r = 0.9977
FC from each subject's full predicted/true sequence in the dense rolling cache; true history is refreshed at every TR. Group panel gives each subject equal weight; this is tracking fidelity, not autonomous generation.
